Installation of DHM020 Mirror Blockoff Plate Kit for Buell® XBR

This high quality, American engineered and American manufactured kit was designed specifically for your Buell® XBR motorcycle. The kit allows the owner to remove the OEM mirrors for racing applications and retain the structural connection between the fairing stay and the fairing. Installation of the kit is straightforward and requires few tools.

Always wear the appropriate safety gear. Serious injury or death may result if this warning is not followed.

- ❑ Locate the hardware that fastens the right hand OEM mirror to the fairing stay and remove. DHM suggests that the hardware be reinstalled on the mirror for possible future use.
- ❑ Locate the stainless steel washers and button head screws. Add one drop of the supplied retaining compound to each screw. Insert two screws with washers into the fairing stay, through the fairing, and finally into the blockoff plate. Extra washers are included in the event that they are needed as shims under the heads of the supplied mounting screws.
- ❑ Torque each M6 fastener to 36 in-lbs (4 Nm)
- ❑ Repeat for the left side of the bike.

The blockoff plate kit installation is now complete. If you have any questions, please do not hesitate to contact us at darkhorsemoto@earthlink.net

The plates are made of aircraft quality 6061-T6 aluminum. Use the same cleaner, polish, and protectors that your owner's manual recommends for your wheels. If you have any questions, please do not hesitate to contact us at darkhorsemoto@earthlink.net

Thank you for purchasing your new DarkHorseMoto™ Mirror Blockoff Plate Kit. Please visit our web site regularly to see more high quality accessories for your motorcycle; see darkhorsemoto.com
